

Advanced Brain Technologies Celebrates 12 Years of Innovation

I am pleased to announce a significant milestone: **Advanced Brain Technologies is celebrating our 12 year anniversary.**

Since 1998, we have been at the forefront of applied music effects research and brain fitness software development, innovating programs that help people of all ages achieve their unique and extraordinary potential.

Much has changed since our inception: today when we share the benefits of music and cognitive training on health and education, our words no longer fall on deaf ears. The neuroscience community has embraced the concept of neuroplasticity, and the public now understands the brain can change in wonderful, miraculous ways with frequent, targeted, cognitive training.

As the end of 2010 draws near and the second decade of the new millennium will soon begin, we are entering an exciting period of expansion at ABT. New research, products, and technology will ensure we maintain a leadership position in this vibrant and emergent field.

This is a time of convergence: technology, science, and public awareness are creating the perfect storm of opportunity to increase accessibility to Advanced Brain Technologies solutions for brain health and performance.

We will remain resolute to preserve your trust and confidence, striving to innovate and anticipate your needs and exceed your expectations, while remaining responsive to your suggestions for our continued improvement.

In closing I would like to express my deep appreciation for our amazing and dedicated ABT team, family, adjunct faculty, representatives, customers, evangelists, and vendors for believing in us and spreading the good news about Advanced Brain Technologies. It is with immense gratitude that I say thank you!

Sincerely,

Alex Doman

Founder & CEO

The AOTA Conference is taking place April 29-May 2, 2010 in Orlando, Florida at the Orange County Conference Center.
